WorldPosta

v1.0 / 2026

DIGITAL DESIGN SYSTEM

Design System

Foundations, accessibility and expression rules for worldposta.com and every landing page that carries the brand.

Companion to the WorldPosta Brand Guidelines

CONTENTS

What's inside

Part 01

Brand Core

Logo system & lockups

Product logos

Clear space & minimum size

Misuse

Part 02

Foundations

Colour — light & dark tokens

Contrast & colour application

Typography stack & scale

Spacing, grid & breakpoints

Elevation, surfaces & gradients

Motion principles & timing

Part 03

Expression & Application

Iconography

Buttons & CTA anatomy

Accessibility rules

Photography & illustration

Do / Don't layouts

Social & ad templates

Token appendix — CSS & JSON

01

Brand Core

The fixed assets. Everything in Parts 02 and 03 is designed to protect these three pages.

Lockups

Primary — full colour

The original master artwork. White surfaces only.

Mono — navy

Tinted surfaces, single-colour print.

Reversed — white

Navy, imagery and dark theme.

Mark — navy

Favicons, avatars, tight spaces.

Mark — reversed

On green or photography only.

The full-colour lockup is the master; the navy and reversed files exist only where colour can't survive. No other colourway exists — never recolour the mark to a product accent, and never place a navy lockup on navy.

The product family

Posta

CloudSpace

CloudEdge

Posta

Business mail & collaboration

Amber-to-coral fill. The only place warm colour appears in the brand.

CloudSpace

Hosting & storage

Teal-to-lime fill, closest to the master palette.

CloudEdge

Managed IT & monitoring

Flat signal green. Reserved for service and support surfaces.

The shared device. Every product mark is the same navy ring with a differentiated inner disc and a white glyph. Ring geometry, weight and gap never change between products.

Hierarchy. Product marks never replace the WorldPosta lockup — they sit below it, at 60–80% of its optical size, with the master lockup always present on the page.

Give it room

Clear space **x** equals the height of the globe mark. Nothing — type, image edge, button — enters that field.

MINIMUM SIZES

Full lockup — screen	120px wide
Full lockup — print	30mm wide
Mark — screen	24px
Mark — favicon	16px (simplified)

> Below 120px, drop the descriptor line and use the mark alone rather than shrinking the lockup further.

Never do this

01 — Stretch or condense

02 — Rotate or tilt

03 — Recolour

04 — Navy on green

05 — Navy on busy imagery

06 — Add effects or shadows

02

Foundations

Colour, typography, spacing, grid, elevation and motion — expressed as tokens so design and code stay in step.

Core palette

Posta Navy
#284050 · --wp-navy
Primary ink, nav, footers, dark panels

Signal Green
#689840 · --wp-green
CTAs, highlights, hairline rules

Surface
#F6F5F4 · --wp-surface
Page ground, section alternation

Slate
#7C8890 · --wp-slate
Meta text, borders, disabled states

EXTENDED RAMP

#0F1A21	#1B2C38	#4E7530	#8CB86A	#5A6670	#E2E1DE	#FFFFFF

Dark tokens & contrast

Base
#0F1A21

Surface
#16242D

Elevated
#1E313C

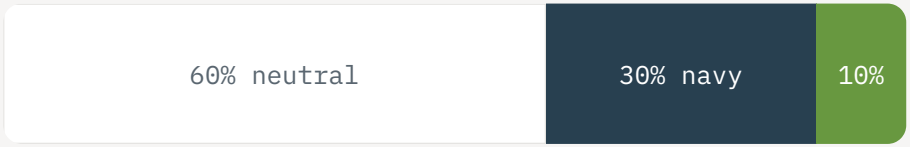

Accent
#8CB86A

On dark, #689840 drops to 2.6:1 against the base — always substitute #8CB86A for text and icons, and keep #689840 only for filled buttons.

MEASURED CONTRAST

PAIR	RATIO	VERDICT
Navy on white	10.7:1	AAA
Slate-dark #5A6670 on white	5.9:1	AA
Slate #7C8890 on white	3.6:1	Large only
White on green #689840	3.4:1	Large / UI
#8CB86A on base #0F1A21	7.7:1	AAA
#F6F5F4 on base #0F1A21	16.2:1	AAA

Rationing the green

A page is white and surface first, navy second, green last. If you can point at more than three green elements above the fold, one of them is decoration — remove it.

GREEN EARNS

- Primary CTA fill
- Active nav indicator
- Eyebrow labels
- Hairline section rules
- Data highlight, one per chart
- Focus ring

GREEN NEVER

- Body text on white
- Large background fields
- Gradient-on-gradient washes
- Card backgrounds
- Two adjacent CTAs
- Error or warning states

Semantic colours — success #4E7530, warning #E0B34A, error #B0473A, info #4A7A96. Used for state only; never borrowed for brand expression.

Three tiers

TIER 01 — DISPLAY

Aa

Magistral

Bold 700 / Medium 500

Headlines, section titles, numerals in hero stats. Never below 26px.

Web fallback: Titillium Web — no licensed webfont in the stack yet.

TIER 02 — BODY & UI

Aa

Public Sans

300 / 400 / 600

All running copy, buttons, forms, tables. 300 for long paragraphs, 400 for UI, 600 for emphasis.

TIER 03 — META

Aa

IBM Plex Mono

400 / 500

Eyebrows, labels, code, spec values, pricing units. Always uppercase with 3–5px tracking when used as a label.

Never mix Magistral and Public Sans within a single line.

Never set body copy in Magistral below 26px.

Never use mono for sentences.

Web type scale

Display XL	clamp(48px, 6vw, 72px) / 1.05
Display L	clamp(40px, 4.5vw, 56px) / 1.1
Heading 1	44px / 1.15
Heading 2	34px / 1.2
Heading 3	26px / 1.3
Body Large	20px / 1.6
Body	17px / 1.65
LABEL	13px / 1.4 · +4px tracking

RULES

Ratio 1.25. Line heights round to the 8px grid.

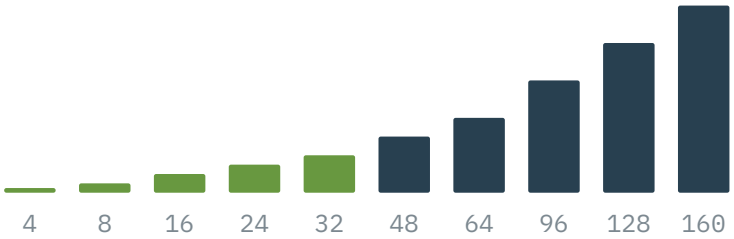

Measure: 60–75 characters. Hard cap 720px on body columns.

One Display per viewport. Two competing headlines is a layout error.

Tracking: −2 to −7px on display, 0 on body, +3 to +5px on labels.

Mobile: Display XL floors at 48px, body never below 17px, labels never below 12px.

Eight and its multiples

Rhythm

Section padding — 160px desktop / 96px tablet / 64px mobile

Headline to body — 32px

Card grid gap — 32px

Inline control gap — 16px

Radius

12px for controls and small cards, 20px for panels and media, pill for chips and tags only.

Discipline

If a value isn't on the scale, it doesn't ship. 20px, 40px and 100px are the three most common violations — round to 16, 32 or 96.

Twelve columns

Container max 1280px · gutter 24px · margin 40px

12 col

< 480
Mobile
4 col · 16px gutter · 24px margin

768
Tablet
8 col · 24px gutter · 32px margin

1024
Laptop
12 col · 24px gutter · 40px margin

1280
Desktop
12 col · container caps here

1536+
Wide
Container centres; only full-bleed media grows

Light, not weight

Flat — 00

`1px solid #E2E1DE`

Default cards, table rows

Raised — 01

`0 2px 8px rgba(40,64,80,.08)`

Hover on flat cards

Floating — 02

`0 12px 32px rgba(40,64,80,.12)`

Dropdowns, pricing highlight

Overlay — 03

`0 28px 64px rgba(40,64,80,.18)`

Modals, cookie bar

Shadows are always navy-tinted — never pure black, never coloured green. On dark theme, elevation is expressed by surface lightening (#0F1A21 → #16242D → #1E313C), not by shadow.

Three, and only three

Navy depth

`145deg, #284050 → #1B2C38`

Hero panels, footers, full-bleed sections.

Green orb glow

`radial 78% 88%, green .55 → 0`

The signature. One orb per section, always off-canvas.

Surface fade

`180deg, #FFFFFF → #F6F5F4`

Soft section transitions on light pages.

Rules. Gradients live behind content, never on it. Text always sits on the solid end. Orb opacity caps at 0.30 when type crosses it. Maximum one gradient surface per viewport.

Violations. Green-to-blue rainbows, three-stop washes, gradient text, gradient borders, gradient on gradient, animated hue rotation.

02.10 MOTION

Expressive, governed

TOKEN	DURATION	EASING
micro	120ms	ease-out
standard	200ms	(.2,.8,.2,1)
emphasis	320ms	(.2,.8,.2,1)
hero	500ms	(.4,0,.2,1)
ambient drift	18s loop	linear

THE EXPRESSIVE FOUR

Scroll reveal. 24px rise + fade, 320ms, 60ms stagger, fires once at 15% visibility.

Parallax. Background layers only, maximum 40px travel. Never on text.

Cursor glow. 480px radial, green at 12% opacity, dark surfaces only, 1 per page.

Gradient drift. Orb position animates 18s linear, ±6% travel, no hue change.

> **prefers-reduced-motion** — parallax, drift and cursor glow switch off entirely; reveals collapse to a 120ms opacity fade. This is not optional.

03

Expression & Application

Icons, CTAs, accessibility, imagery and the templates the marketing team ships every week.

Thin line, 24px grid

CONSTRUCTION

24×24 grid · 20px live area
1.5px stroke · round caps
2px min radius · never filled

STARTER SET

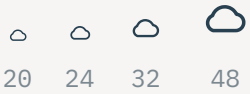

cloud

mail

Every future icon is built on this construction. Requests go through design — no mixing in third-party icon sets, no filled variants.

SIZES & COLOUR

Navy on light, white on navy, #8CB86A on dark. Green icons on white are reserved for the active state.

One primary per view

ANATOMY — PRIMARY

Start free trial →

height 56px · radius 12px
padding 0 32px · gap 14px
icon 18px · label 18px / 600

HIERARCHY

Primary | Secondary | Tertiary link | Disabled

STATES

Rest | Hover | Active | Focus

SIZES

Large — hero CTA	64px
Default — desktop	56px
Compact — mobile, nav	48px
Absolute touch floor	44px

COPY RULES

Verb first, two to four words. Sentence case.

Name the outcome: "Start free trial", not "Submit".

Never "Click here", "Learn more" alone, or "Get started now!".

> Two green buttons side by side is always wrong — the second becomes secondary.

AA is the floor

Colour & contrast

Body text 4.5:1 minimum. Display type 3:1.

#7C8890 never carries body copy — use #5A6670.

Green text on white is display-scale only.

Colour never carries meaning alone — pair with icon, label or weight.

Focus & keyboard

Focus ring: 3px #284050, 3px offset. On dark: 3px #8CB86A.

Never *outline: none* without a replacement.

Skip-to-content link on every page.

Tab order follows visual order. Modals trap focus and return it.

Structure & motion

One h1 per page; headings never skip levels.

Every image gets alt text; decorative orbs get *alt=""*.

Touch targets 44px minimum with 8px separation.

Honour prefers-reduced-motion. Nothing autoplays with sound.

Text zooms to 200% without loss of content.

SHIP GATE Keyboard-only pass · contrast check on every new colour pair · zoom to 200% · screen-reader pass on forms and nav. A page that fails any of the four does not ship.

Grounded, graded

Infrastructure — cool navy grade

People at work — natural light

Product in context — screen visible

Abstract surface — texture only

DIRECTION

Real rooms, real hardware, real teams. Wide angles, deep space.

Grade cool — navy shadows, restrained green in highlights.

People are working, not posing. Faces optional, hands welcome.

Crop to 16:9, 4:3 or 1:1. Radius 20px unless full-bleed.

Text on imagery needs a navy scrim at 55% or greater — check 4.5:1 against the lightest pixel behind the type.

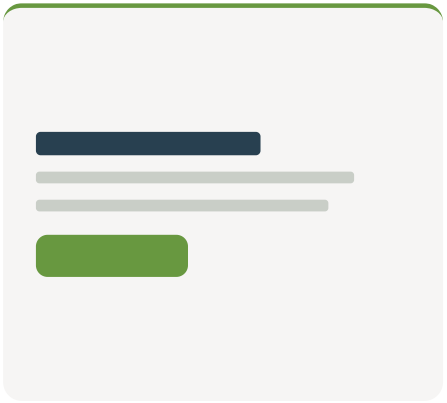

NEVER

Stock handshakes, boardroom smiles, arrows-up metaphors.

Glowing 3D clouds, wireframe globes, binary rain.

Heavy filters, vignettes, or text baked into the image.

Seen in review

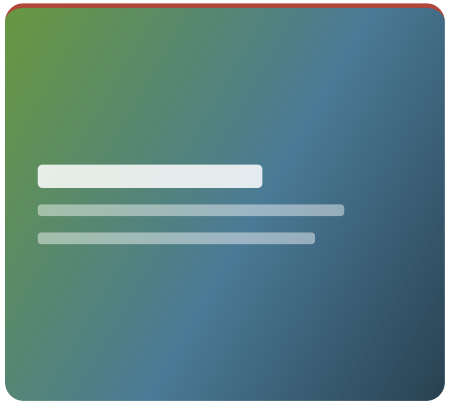

Do — one headline, one paragraph, one CTA. Left-aligned, 720px measure.

Don't — centred everything, full-width measure, two competing green CTAs.

Do — one orb, off-canvas, behind the text. Type on the solid side.

Don't — multi-stop rainbow wash with type sitting in the busiest zone.

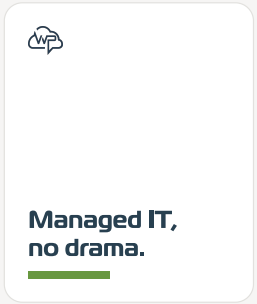

Also do — alternate white and #F6F5F4 sections for rhythm; keep one idea per section.

Also don't — stack three cards of different radii; fill dead space with icons; centre body copy over 60 characters.

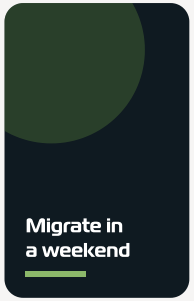

Placement kit

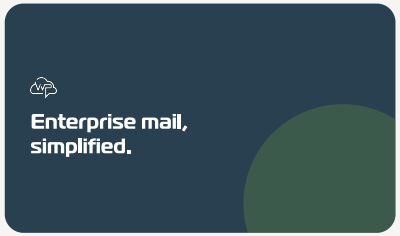

1080×1080

1080×1350

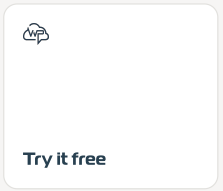

1080×1920

1200×628

1600×900

300×250

728×90

160×600

> Safe margin = 4% of the short edge. Mark top-left, one line of copy, one green rule. Headline caps at seven words; no logo lockup below 300px wide — mark only.
